CONTENTS

Volume 29, Issues 1–6

International Journal of
MATHEMATICAL EDUCATION in SCIENCE and TECHNOLOGY

Issue No. 1, JANUARY

Articles

Student preferences for representations of functions B. A. KELLER and C. R. HIRSCH 1

Is $\hat{\pi}$ periodic? Y. K. HUEN 19

Solution to the torsion problem for a corner J. P. WARD 27

Levels of understanding of probability concepts among secondary school pupils S. MUNISAMY and L. DORAISAMY 39

Derivation of the solution of a simple hypersingular integral equation A. CHAKRABARTI and B. N. MANDAL 47

Mathematical thinking of high school students in Nebraska L. A. LUTFIYYA 55

The trihedral angle Y. NAHIR 65

Numerical and algebraic approaches to the study of errors of approximation for Euler's constant K. READ and D. HOBBS 83

Potential theory: reformulating boundary-value problems as integral equations S. J. FARLOW 97

The accuracy of solutions of linear equations in practice J. R. WEBSTER and G. A. EVANS 105

Randomness, its meanings and educational implications C. BATANERO, D. R. GREEN and L. R. SERRANO 113

Classroom Notes

The angle between adjacent faces of a Platonic solid D. W. LEWIS ... 125

Term-by-term multiplication of sequences and radii of convergence M. P. ROBINSON and J. S. SPRAKER 128

An algebraic criterion for degenerate conic sections D. E. DOBBS ... 132

The distribution of odd numbers in the Pascal triangle Z. LIKUAN and L. JIBAO 134

Vectors and linear division R. J. CLARKE 137

Synthetic construction of points in geometry with given trilinear coordinates M. K. F. WONG 143

A note on logarithms of complex numbers A. CHAKRABARTI 145

The barycentre as a tool for proving theorems F. R. MONTANER 148

A note on moment estimators P. TAN and R. KHAN 155

Issue No. 2, MARCH

Articles

Learners' difficulties with induction proofs J. SEGAL 159

A generalization of Jameson's method for Sylvester's matrix equation A. J. B. WARD 179

Wheels, cranks and cams: an animated spreadsheet-based mathematical model of a four-stroke engine J. T. CALLENDER and R. JACKSON ... 187

An analysis of a Jacobi iteration P. GLAISTER 195

A novel spreadsheet method for solving non-linear equations in one variable G. PROBERT 215

A biased estimate of proportion B. R. ASRABADI 225

Manipulative and numerical spreadsheet templates for the study of discrete structures S. ABRAMOVICH 233

The stochastic growth equation: the growth of funds R. GAY 253

Two-way ANOVA problems with simple numbers K. L. Q. READ and L. H. SHIHAB 261

Simplifying teaching the transportation problem V. G. ADLAKHA and H. ARSHAM 271

Phase plane analysis of simplified Ramsey models R. F. MELKA 287

Classroom Notes

Misapplication of the power method J. P. WARD 295

Kinematics of bomblet spin S. V. LOKRE 297

Antimagic labellings of the complete graphs with a common vertex M. ARISOY 301

Filtering the interpolant is equivalent to interpolating the filtered data R. PICHE 305

Announcements 313

Corrigendum 315

Issue No. 3, May

Articles

An analysis of future mathematics teachers' conceptions and attitudes towards mathematics M. Camacho, M. M. Socas and J. Hernandez 317

Roth's removal theorem for lambda matrices A. J. B. Ward 325

Tetrahedron and octahedron fractals H. Zeitler 329

A graphic representation of the solution of the Weber problem in the space of the weights F. Mazzarella and G. Pesamosca 343

Is calculus *really* that different from algebra? A more logical way to understand and teach calculus S. B. Elk 351

How to make sure that the error in the $f(x)\,dx$ term is insignificant when setting up definite integrals K. Tarvainen 359

On the generalized d'Alembert wave equation G. C. Ducati and E. C. de Oliveira 371

An application of genetic algorithms to optimization of cancer chemotherapy A. Petrovski, J. A. W. McCall and E. Forrest 377

First-year university students' understanding of rate of change J. Bezuidenhout 389

Do third-year mathematics undergraduates know what they are supposed to know? J. Anderson, K. Austin, T. Barnard and J. Jagger 401

Eastern and Western mathematical education: unity, diversity, and problems G. Malaty 421

Classroom Notes

Studies in Bessel functions via Laplace transforms F. Chorlton 437

Green's identity – analogy and application P. Glaister 444

S–P chart and instructional decisions in the classroom I. Chacko ... 445

Overdetermined problems for the inhomogeneous biharmonic equation P. W. Schaefer 450

Vector equations and their solutions G. Trenkler 455

Applications of the binomial theorem S. H. Friedberg 459

From the centre you can see the whole A. Buxkemper and D. J. Hartfiel 464

A simple proof of a Slutsky-type result M. P. Quine 471

Issue No. 4, July

Is remedial mathematics a real remedy? Evidence from learning statistics at tertiary level D. U. A. Galagedera 475

Teaching polynomial fitting to a set of data via orthogonal polynomials J. J. M. Balcazar and F. R. Lorite 481

Chebyshev series solution of linear Fredholm integrodifferential equations H. Koroglu 489

Triangles and trilinear coordinates H. B. Griffiths and A. Oldknow ... 501

Identifying stumbling blocks in the development of student understanding of moments of forces S. Rowlands, T. Graham and J. Berry 511

Developing a diagnostic framework for evaluating student approaches to applied mathematics problems V. Geiger and P. Galbraith 533

A theorem on a Laplace-type integral transform and its applications O. Yurekli and O. Sayginsoy 561

Numerical quadrature of analytic functions R. N. Das and G. Pradhan 569

A finite element case study for electric field analysis J. H. Tabor ... 575

Classroom Notes

On the placing of balls in cells L. J. Ciach 585

Formulae for the general terms of the generalized Yang Hui's triangle G. Yuling and S. Fengpo 587

A geometric approach to the Lagrange remainder formula S. P. Gordon 593

An analytical proof of the Cayley–Hamilton theorem S. H. Friedberg 598

Computing arclength by means of improper integrals D. E. Dobbs ... 600

An application of Gauss' method of sums D. M. Spresser 605

A hands-on approach to non-Euclidean geometry C. N. Schultes ... 609

New approaches to a classical problem W.-C. Yang, S. Thompson and C.-C. Lin 613

Complex inversion formula for Sumudu transform S. Weerakoon ... 618

Hadamard's inequality J. Howard 621

Some relationships of polynomials with multiple zeros A. Sofo and P. Cerone 623

Schur's inequality reconsidered J. Gross 629

Issue No. 5, September

Articles

Instructional qualities of a successful mathematical problem-solving class M. Santos-Trigo 631

Lucas numbers and the ménage problem N.-H. Bong 647

Integrating geometry in a meaningful way (a point of view) M. Tikoo ... 663

Brief historical introduction to wavelet transforms L. Debnath 677

Digits reversed Pythagorean triples S. Jiang and R.C. Chen 689

A large-scale schools/higher education collaboration to implement systemic change in mathematics teaching and learning P. E. Johnson and M. K. Harris 697

Educational software in mathematics: developing and using a mathwise module N. Pitcher 709

Modelling and analysis of magnetic interaction between an electromagnetic robot gripper and a stack of transformer laminations using z-transform B. Postma, T. Vinay, T. Kangsanant and A. Harvey 721

Much ado about nothing—an introductive inquiry about zero L. Pogliani, M. Randic and N. Trinajstic 729

Classroom Notes

An interesting property of pythagorean triplets M. N. Deshpande ... 745

A heuristic interpretation of the incomplete beta function ratio K. C. Chae and H. K. Lee 746

The graphical–numerical method for solving equations and inequalities involving absolute values of linear functions N. Movshovitz-Hadar and A. Shmukler 749

Solutions of boundary value problems by double Laplace transformations S. N. Singh 758

Links among a linear system of equations, matrix inversion, and linear program solver routines H. Arsham and M. Oblak 764

An 'incredible' Bayesian estimator A. V. Boyd and G. V. Kass 770

Rocks in your head data analysis project B. J. Winkel 773

On the statistical independence in a contingency table A. H. Joarder ... 780

A path having all of its subpaths of infinite length M. Lynch 782

A 'classical inequality' for positive semidefinite matrices J. Gross ... 785

Issue No. 6, November

Articles

Modelling the projectile motion of a cricket ball P. Coutis 789

On the numbers that preserve their fractional parts when raised to negative powers P. Filipponi 799

The use of microcomputers in the analysis of mathematical knowledge schemas M. Chinnappan, M. J. Lawson and D. Gardner 805

Is it possible to confine the application of the intuitive rule: 'Subdivision

processes can always be repeated'? D. Tirosh, R. Stavy and M. Aboulafia 813

Creating a diversity of mathematical experiences for tertiary students G. Ball, B. Stephenson, G. Smith, L. Wood, M. Coupland and K. Crawford 827

Teaching abstract algebra concepts using small group instruction I. Cnop and F. Grandsard 843

The boundary element method on a spreadsheet A. Davies and D. Crann 851

An experimental study on the effectiveness of metacognitive and heuristic problem solving techniques on computational performance of students in mathematics M. O. Oladunni 867

Combined variational–perturbative approach to anharmonic oscillator problems W. N. Mei 875

Classroom Notes

A generalization of Fermat's problem revisited S. H. Kung 895

Matrix-tertions and matrix-noitrets: exercises in mathematical enrichment K. T. Atanassov and A. G. Shannon 898

On confidence intervals for the probability of success when sampling is without replacement H. Sahai and A. Khurshid 904

Nth-order differential equations with finite polynomial solutions G. B. Costa and L. E. Levine 911

On the integral $(\sin x)^{p+q}/x^q$ A. Sofo 914

Coaxial Poiseuille flow as a general counter-example R. Low 918

Triangles, polygons and beams of light T. Dana-Picard and A. Haenel 922

A verification of the definition of $\ln x$ with an interpretation of continuous compounding using differential equations O. Baytekin 929

Author Index 937
